The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. On a risk scale 1 to 7, we have rated the Sub-Fund at 2 which is a “low” risk category. This classification results from the market risk and the credit risk to which the Sub-Fund is exposed. The market risk from potential losses due to future performance is rated as “low” level, while due to credit risk, poor market conditions are “very unlikely” to impact the company’s ability to pay you. Other relevant risks of the Sub-Fund not included in the summary risk indicator are issuer credit risk (the risk of a bond issuer or money market instrument) to default on its obligations, operational risk and sustainability risk. The Sub-Fund does not include any protection from future market performance so you could lose some or all of your investment.
